

Carvey smashes Kickstarter goal in less than 1 hour 30 minutes

3D carving machine reaches \$50,000 funding goal

October 21, 2014 Chicago, IL – [Carvey](#), the next step in 3D manufacturing, is a remarkably easy-to-use 3D carving machine. Having smashed its Kickstarter goal of \$50,000 in less than 1 hour 30 minutes, production will now begin with early bird backers receiving their units in September 2015.

<https://www.kickstarter.com/projects/carvey/carvey-the-3d-carving-machine-for-the-maker-in-all>

Carvey allows users to create original, handmade objects out of a variety of materials, such as woods, metals or plastics and is small enough to fit onto your tabletop. Due to its aluminum case Carvey is quiet enough for you to use at home, in your workplace or within a classroom setting so is ideal for anyone who wants to make their designs a reality, whether an experienced maker or not.

“Over the past 1.5 years we have been creating something that we thought the maker community would love. It means a lot to us that they have supported Carvey so early on to help us make it a reality” explains Zach Kaplan Inventables CEO. “We are astounded by the response so far and are excited to finally bring Carvey to market.”

Carvey comes with Easel, the free design software that enables you to design in 2D and 3D instantly meaning it ready to use straight out of the box. Design or import your ideas, connect Carvey via USB, click “carve” and then watch as it creates your objects.

Key features of Carvey include:

- Smart Clamp with automatic calibration so you can click “Carve” to start
- Case design makes the machine quiet enough for you to talk on the phone while it's running
- Seamless integration with Easel software for easy workflow from design to finish
- Color-coded bit system simplifies multi-cut jobs
- LED lighting inside the case to keep you aware of progress

Carvey is still available to back on Kickstarter, with early bird pledge levels starting from \$1999.

About Inventables

Founded in 2002, Inventables' mission is to ignite the digital manufacturing revolution by simplifying the path from idea to finished product. Recognized as the hardware store for designers, Inventables sells desktop manufacturing machines and thousands of materials in small quantities. Small manufacturing businesses purchase raw materials

and machines from Inventables' online store daily to use in manufacturing their own products from jewelry to eyeglasses to sell to customers. When a material from the site is needed in a large volume, Inventables assists in making connections to the manufacturer or supplier.
