

## **Inventables™ Raises \$11.5 Million Series C to Bring 3D Carving to 1 Million Businesses**

*Cue Ball leads the round with existing investors including True Ventures, Greycroft, and Pipeline Capital participating*

Chicago--July 23, 2019-- Inventables, the leader in 3D carving software and machines, is pleased to announce an \$11.5 million Series C funding round. Inventables will invest this new Capital to enhance its innovative 3D design and carving software, Easel™. The goal is to make Easel compatible with machines manufactured by partner companies. The funding round was led by Cue Ball with participation from True Ventures, Greycroft, Pipeline Capital, Draper Associates, Mike Gamson and the CEO of LinkedIn, Jeff Weiner.

“We are excited to see thousands of American businesses using our products for production. This investment enables Inventables to enhance the functionality and compatibility of our Easel software, helping our business customers produce products faster and more profitably,” CEO and founder Zach Kaplan said.

Inventables business customers make products using Inventables' 3D carving software and machines. These manufacturers use Easel and the X-Carve to produce products like signs, guitars, furniture, drones, and jewelry. Large enterprises also use 3D carving machines to rapidly prototype ideas before sending them out for larger-scale manufacturing.

“It is rare that you have the opportunity to be part of a company that has the highest integrity and character of management with a highly purposeful and exciting product that can reshape and define an entire category. The integration of software to an incredibly well-engineered, high-value 3D carving machine is simply amazing. We are honored to be part of this investment group and join Zach and his leadership group,” said Tony Tjan, a Cue Ball investor who will be joining the Inventables board.

This year Inventables customers will carve more than 4 million projects. Keep up to date on the company's progress via the Inventables [Instagram](#) account.

### **About Inventables**

Inventables is a 3D carving company offering intuitive software and an easy-to-use carving machine, and unique carving materials. Easel, our design platform, is the most accessible and user-friendly design software on the market. Paired with our affordable 3D carving machine, X-Carve, makers of all abilities can produce their first project in minutes.

Inventables vision is to ignite a new product revolution by bringing manufacturing capability into the hands of millions of people. Their Easel 3D design and control software is available at [www.easel.com](http://www.easel.com). Easel works seamlessly with Inventables' X-Carve 3D carving machine to power independent manufacturing and soon, hundreds of other machines. Finally making digital production a reality.
